4 MP DeepinView Self-Cleaning Bullet Camera

DeepinView series

Hikvision has been dedicated to develop products with security since established.

Hikvision always follows security by design principle and has adopted many methods of security technologies into our product development lifecycle, including terminal security, data security, application security, network security, and privacy protection. In the meantime, the security technologies used by Hikvision are all in compliance with local applicable laws and safety regulations. These security measures could enhance product's cyber security defense capability and protect your devices as well as your data from malicious cyber attacks.

- High quality imaging with 4 MP resolution

- Excellent low-light performance via ColorVu technology

- Efficient H.265+ compression technology to save bandwidth and storage

- Two years maintenance-free with the built-in 2 L large-capacity water box for cleaning the camera window once a week after filling the water box

- Ring-type sunshield to block the stray light incident from outside the range of lens field of view and reduce dust adhesion

- Built-in heater to ensure clear image under rainy or snowy weather and enhance the lens window glass decontamination ability

- Water and dust resistant (IP67) and anti-corrosion protection (NEMA 4X)

*The cleaning liquid is not supplied. It is recommended to use antifreeze glass water that can withstand -40 °C (-40 °F) environment.

▪ Function

Face Capture

With embedded deep learning based algorithms, the camera is able to give the best shot of a target face through detecting, capturing, grading and selecting. The camera uses face exposure function to dynamically adjust face area exposure of captures and ensures high face picture quality.

Perimeter Protection

With embedded deep learning based target detection and classification algorithms, the camera carries out the duty of perimeter protection, monitoring the actions of line crossing, intrusion, region entrance, and region exiting. The algorithms greatly filter out the mistaken alarm caused by the interference of leafs, lights, animal, flag, etc.

Multi-Target-Type Detection

With embedded deep learning algorithms, the camera detects and captures the face, human body, vehicle in the specified region.

Tunnel Event Detection

With embedded deep learning based algorithms, the camera supports fallen object detection, pedestrian detection, parking detection, congestion detection and construction detection.

Road Traffic and Vehicle Detection

With embedded deep learning based license plate capture and recognition algorithms, the camera alone can achieve plate capture and recognition. The algorithm enjoys the high recognition accuracy of common plates and complex-structured plates, which is a great step forward comparing to traditional algorithms. Blocklist and allowlist are available for plate categorization and separate alarm triggering.
